

SpeedMobileStage

General conditions of checkups:

1. "PROTECT SERVICE" is a cycle of periodic, non-mandatory control tests of your Mobile Stage R-6.
2. The service program is designed to determine the overall safety level of the mobile stage, its frame, chassis, load-bearing structure, surfaces and plating - aging, bad weather or corrosion, and any changes in safety levels resulting from repairs or parts replacement. Special attention is paid to suspension systems, braking systems, chassis, frames, bolted connections (bolts, screws, bearings), power hydraulics and the general interior of the device.
3. Reviews are voluntary and should be performed every 12 months with the first review performed after the first 24 months of use.
4. Inspection reviews are documented by the manufacturer or distributor. The result of the test and the scope in the form of a protocol is transferred to the Buyer after the main inspection. The positive result of the diagnostic test is confirmed by placing the hologram (sticker) on the control plate of the device.
5. The cost of the test is 300 euros and takes about 8 hours.
6. The buyer delivers and receives his Stage R-6 at his own expense at an agreed time.
7. If the test is made "On the customer's site" then the manufacturer or distributor accepts this possibility and the cost of the test is estimated individually.
